

How to Install **WooshBuild Infinity** **Zgemma and Enigma 2 Boxes**

WooshBuild Infinity has removed need for individual images for each box. You can install on any box without using any USB.

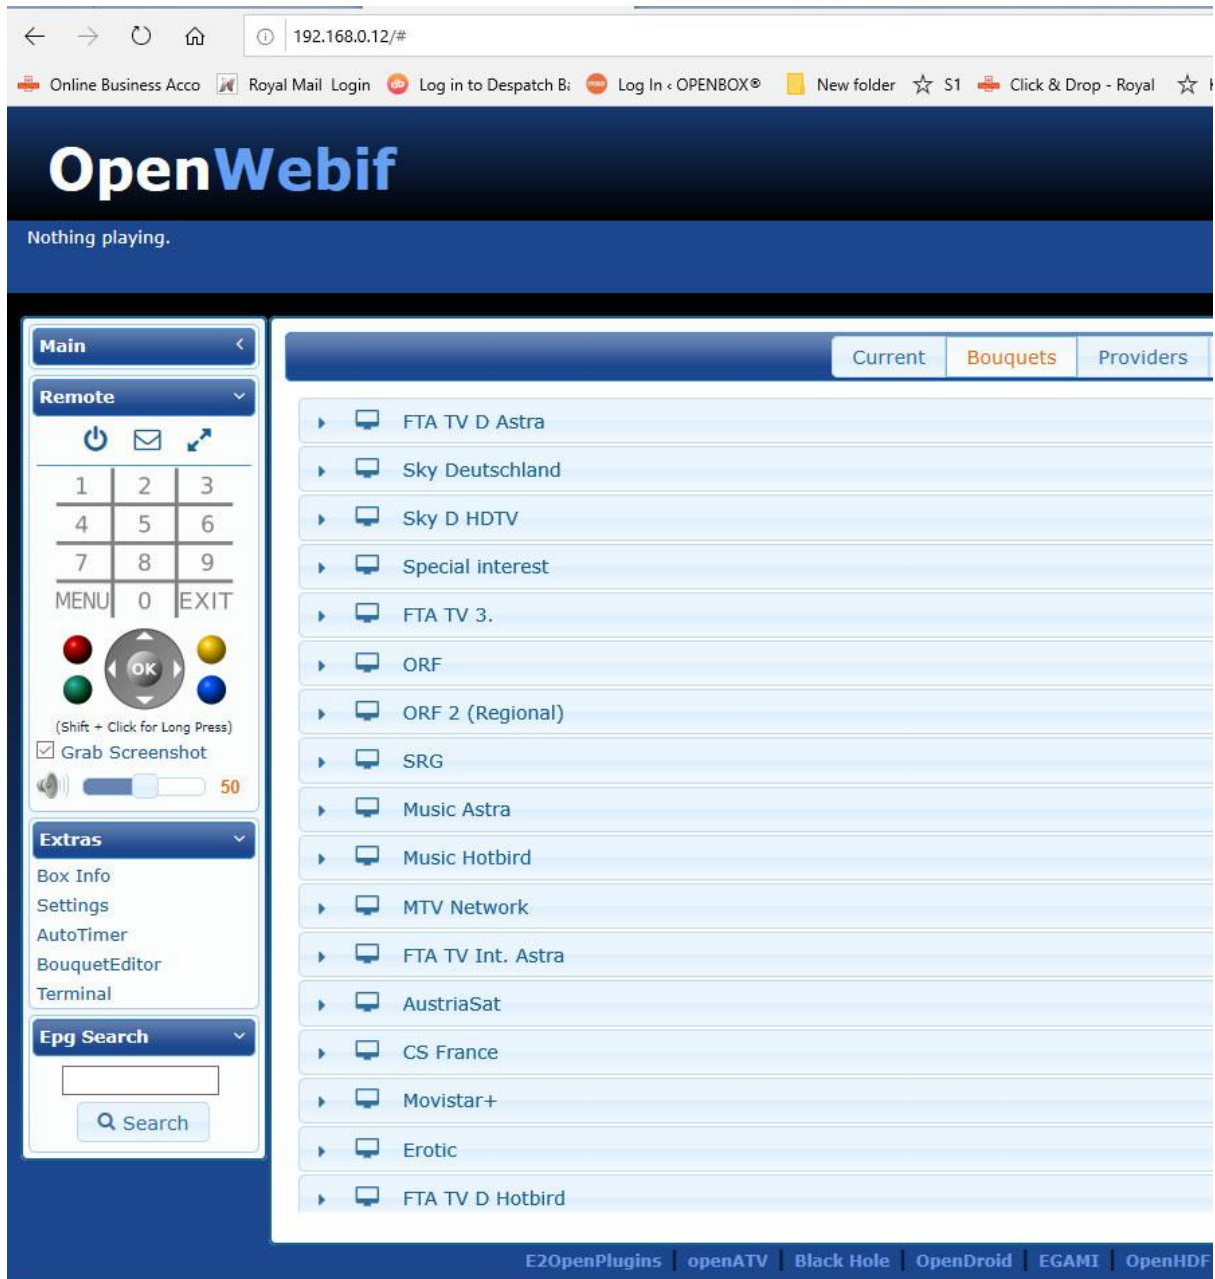

WooshBuild Infinity will work on all Enigma2 boxes whether satellite, cable or IPTV Only, old or new.

Please make sure your box got OpenATV firmware installed. All new boxes already come with OpenAtv firmware.

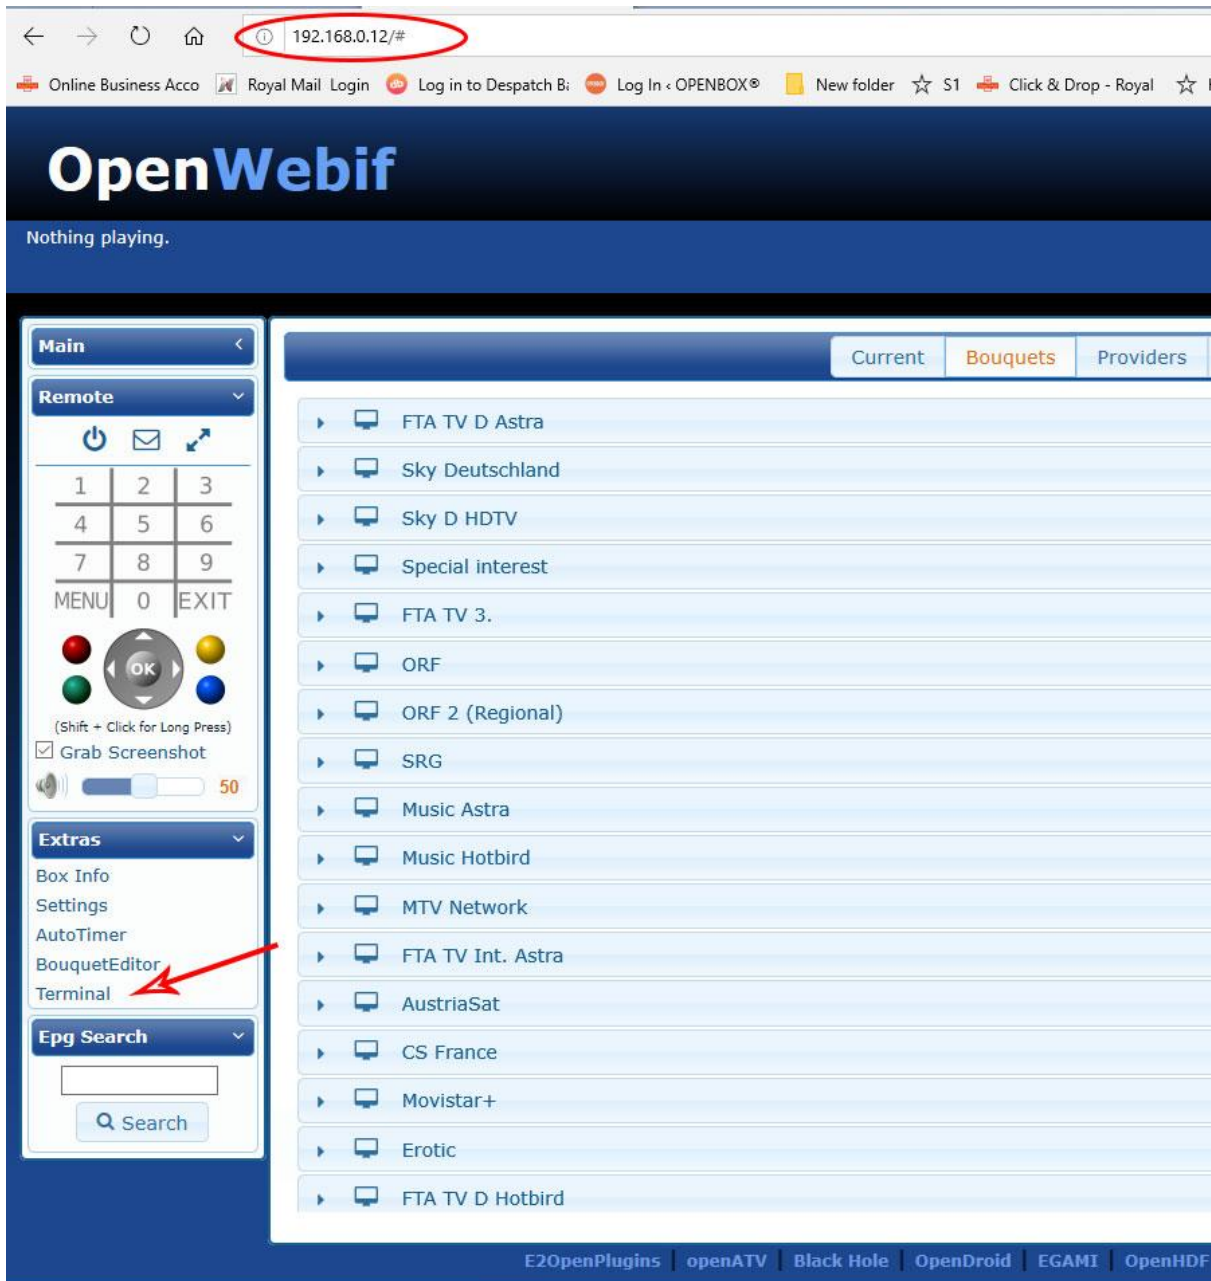

1. Connect your box with TV, internet, satellite and cable (if it is a combi box), power on the box.

2. After switching the box on obtain the IP address of the box. You can get it from box network menu or from the broadband dashboard. (Looks like 192.168.*.*)

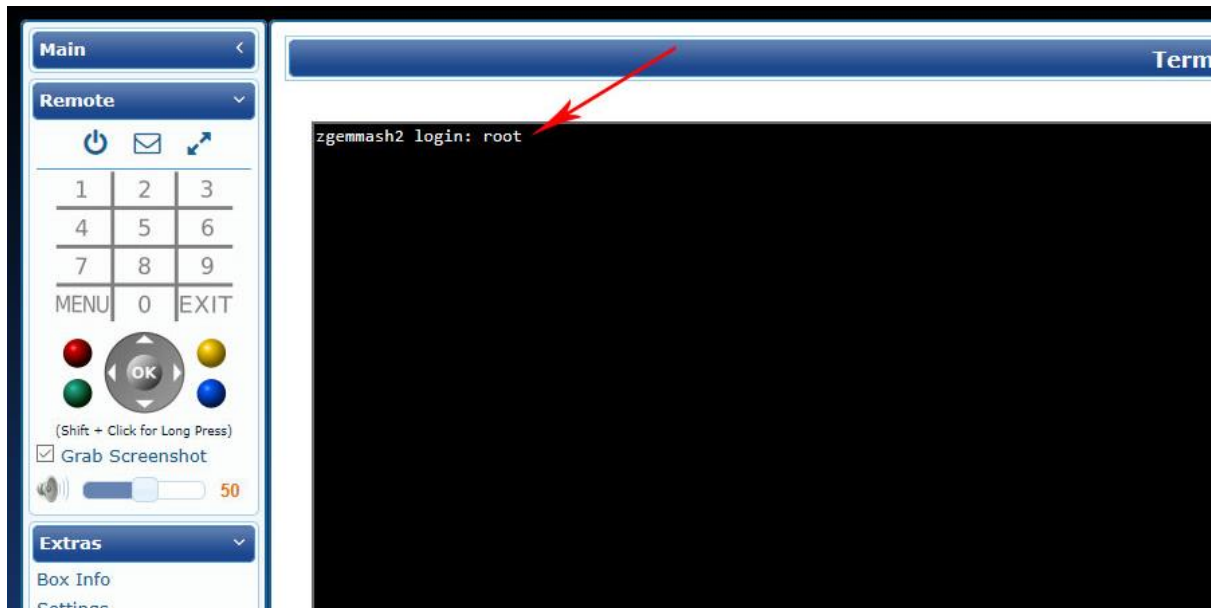

3. Open internet explorer on you computer and type the IP address of the box in address bar. For example if IP address of your box is 192.168.0.12 type it exactly as in the picture below:

- Once you have Webif open in your browser, scroll down on the left and click the word **Terminal**.

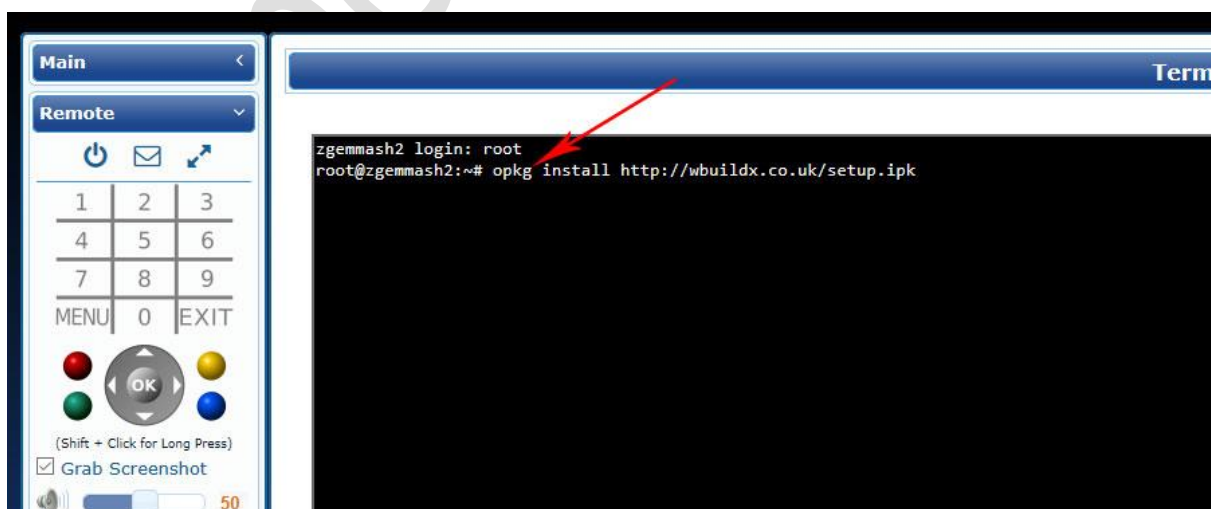

5. Type the word **root** and press enter.

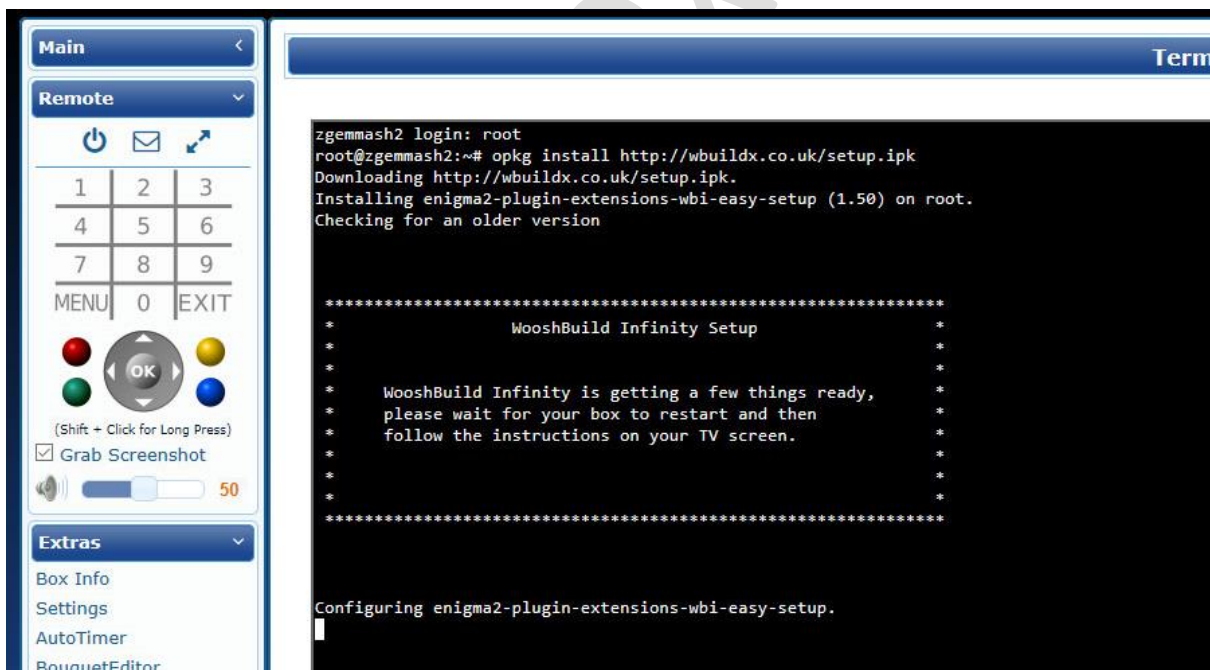

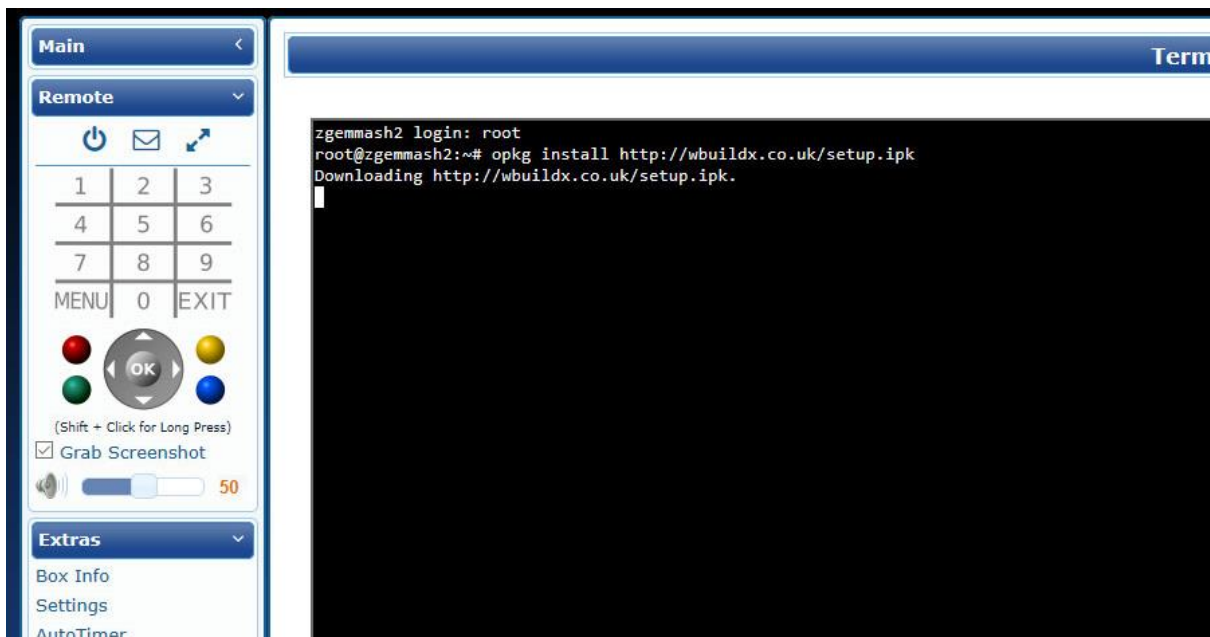

6. Then type the following command at the prompt and press enter:

opkg install <http://wbuildx.co.uk/setup.ipk>

7. You will see the following:

You box will restart and you will be able to use your remote to configure your box.
